LEWIS COUNTY
Where Stonewall Jackson
Grew To Manhood

The Weston Democrat - Wednesday, May 16, 2012—A5

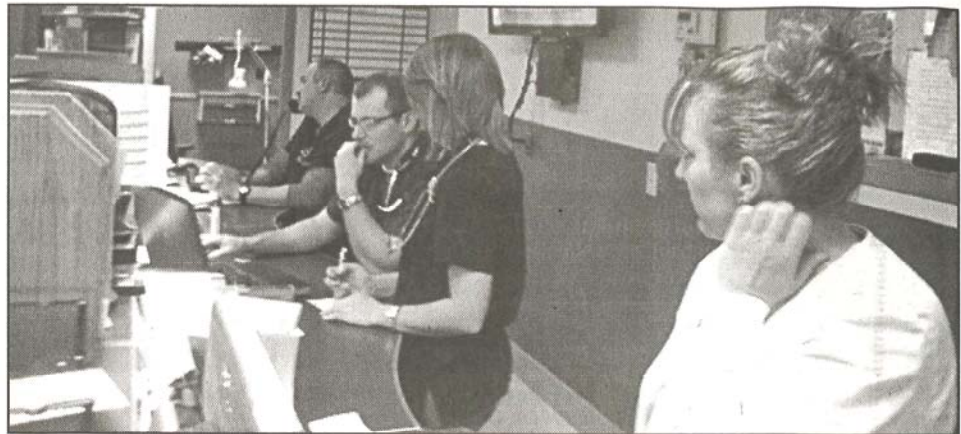

SJMH Using Advanced Software

The next time you visit Stonewall Jackson Memorial Hospital's Emergency Dept., something will be different. The doctors and nurses will be using veEDIS™, an advanced emergency room management software.

"Stonewall Jackson Memorial Hospital's move to veEDIS on April 2, is part of our commitment to continuous improvement of quality patient care," stated Avah Stalnaker, CEO/Administrator.

"While patients might not see anything different when they walk through our doors, they should take comfort in knowing that their hospital is using the most advanced technology. The result is that they will be treated and moved through the emergency department faster." Hospitals have found veEDIS to be adaptable to their current methods of patient care, and benefit from using software that is more sophisticated than systems used by many large city hospitals.

"We are especially pleased that

Stonewall Jackson Memorial Hospital Emergency Department team working with newly deployed veEDIS system.

Stonewall Jackson selected veEDIS for their emergency department software," said Thomas L. Grossjung, President and CEO of veEDIS Clinical Systems.

"veEDIS was designed for community hospitals like Stonewall Jackson where the patient experience is a top priority. Our team of nurses and physicians who developed veEDIS has years of experience working in emergency departments. Their familiarity with the day-to-day challenges resulted in veEDIS simplifying emergency

department management while at the same time providing the latest technology to assist in meeting quality patient care goals."

Stonewall Jackson Memorial Hospital is a Level IV trauma facility providing care to more than 14,000 patients a year. Founded in 1972, the hospital serves the central West Virginia area.

About ProMed veEDIS, veEDIS is Emergency Department software designed to streamline emergency department management. Created by a team of credentialed physi-

cians and nurses, veEDIS combines real emergency department experience with advanced technology to provide software that assists in meeting quality patient care and safety goals.

Certified by the Drummond Group in early 2011, veEDIS enables hospitals to seek the earliest stimulus funding opportunities under the American Reinvestment and Recovery Act (ARRA).
