

## THE NEXT GENERATION EDIS

## EXECUTIVE FEATURES AND BENEFITS

# EXECUTIVE FEATURES AND BENEFITS

## IMPROVE C-SUITE DECISION MAKING WITH COMPREHENSIVE, ACTIONABLE INFORMATION FROM veEDIS™

veEDIS, the Emergency Department Information System for your hospital's C-suite, provides real time information for monitoring and decision making to promote the clinical and financial health of the hospital.

**Monitor the Emergency Department Real Time:** Access status boards and dashboards to monitor census, throughput, ancillary services, resource utilization and other metric preferences. Receive real-time broadcasts and alerts to mobile devices for syndromic surveillance, high risk discharges, department capacity breaches, or other customized events.

**Rich Data Yields Rich Reports:** Nearly all data capture in veEDIS is structured allowing for incredibly rich and detailed reporting. In fact, veEDIS delivers approximately 200 reports addressing all aspects of regulatory, process, quality and risk, and ad hoc reports. And if desired, generate information to CSV file output in order to expand reporting capabilities to meet any need or imagination.

**Automate Charging and Optimize Revenue:** Nurse documented assessments and other activities compile client defined point-based levels to efficiently and consistently determine facility charges. Procedures documented and timed IV fluid infusions automatically determine appropriate charges. Chart finalization integrates submission of charges reducing human resource allocations, errors and turn-around-time.

**Manage Risk:** Quickly identify patients with sufficient illness and potential risks to determine the next most appropriate level of care. Comprehensive reports list all significant quality concerns, risk areas and clinical findings to facilitate timely intervention. Prompts are provided real time and reports are available for daily use to ensure patient safety and follow-up.

**Quality and Incentives:** veEDIS prompts clinicians real-time to comply with clinical Quality Measures and Meaningful Use. Detailed reports identify compliance and opportunities for improvement for the department and for individual nurses and providers.

**Trending:** Monthly reports are automatically delivered to key personnel electronically for tracking and trending purposes. Comparison with previous period data is clear and simple through color coded graphs so that actions for improvement can be identified and implemented.

**Consulting:** We have a team of advanced users and experienced emergency clinicians that have facilitated improvement in hundreds of emergency departments. We analyze a variety of department activities including charting, risk, process and patient flow, charges, Quality Measures and Meaningful Use compliance to customize education programs for nurse and physician users, department and hospital management, as well as quality/risk personnel.

**Leverage Your Data:** Large multi-hospital corporations will benefit from our Year End Report. Presentation of hospital outliers will help facilitate identification of processes that excel at certain

hospitals in order that those processes may be exported to hospitals faltering with regard to the same metric. 5-year trending is also provided for corporations with sufficient data.

**No Capital Costs for Implementation.  
Low Monthly Operating Costs.**

**No Barrier to Entry:** Saves hundreds of thousands of dollars in hardware purchase, maintenance and replacement. Eliminates 3rd party software licensing (Microsoft and other tools) and reduces on-site IT resource needs. No on-site content development required. veEDIS has the richest content in the industry out-of-the box. This includes clinical content, teaching instructions, medications, protocol orders, clinical decision support, complaint-based documentation prompts, reports and more. Further, our thin-client architecture requires only a browser and a modest desk-top computer. Finally, our numerous existing interfaces allow a go live in 30-60 days!

***“Stonewall Jackson Memorial Hospital’s move to veEDIS on April 2 is part of our commitment to continuous improvement of quality patient care. While patients might not see anything different when they walk through our doors, they should take comfort in knowing that their hospital is using the most advanced technology.”***

- Avah Stalnaker, CEO of Stonewall Jackson

# ABOUT veEDIS™

veEDIS is an indispensable tool for effective management and continuous process improvement.

veEDIS is Emergency Department Information System (EDIS) software designed to streamline emergency department management. Created by a team of credentialed physicians and nurses, veEDIS combines real emergency department experience with advanced technology to provide software that assists in meeting quality patient care and safety goals.

veEDIS provides hospitals with an easy way to move to a current state-of-the-art Emergency Department Information System, avoid significant IT capital costs, and position themselves quickly to meet Federal guidelines to receive incentive payments.

veEDIS is certified by the Drummond Group as an EHR technology (CEHRT) that can qualify hospitals to receive payments under *Medicare and Medicaid Electronic Health Record Incentive Programs* (Meaningful Use) enabling them to seek stimulus funding under the American Reinvestment and Recovery Act (ARRA).

This EHR Module is 2011/2012 compliant and has been certified by an ONC-ATCB in accordance with the applicable certification criteria adopted by the Secretary of Health and Human Services. This certification does not represent an endorsement by the U.S. Department of Health and Human Services or guarantee the receipt of incentive payments.
